CPL
CHEMISTRY AND PHYSICS OF LIPIDS

Subject index

Volume 82 (1996)

Acetylation; Phospholipids; Polar head group; Hydrogen bond **82**, 1

Aggregation properties; Synthesis; Novel non-ionic surfactants; Dialkyl polyoxyethylene glycerol ethers **82**, 89

Aging; Plasmalogens; Bovine brain; Plasmalogen epoxide; Free aldehydes; α-Hydroxyaldehydes **82**, 173

Allylic hydroxy groups; ^{1}H-NMR spectroscopy; Rational functions; Logarithmic functions; Fatty acids; Fatty esters **82**, 33

Bilayer membrane; Interdigitation; Phase transition; Pressure; Phospholipids; Vesicles **82**, 125

Bovine brain; Plasmalogens; Plasmalogen epoxide; Free aldehydes; α-Hydroxyaldehydes; Aging **82**, 173

Ceramide phosphate; Synthesis; Thiophosphate **82**, 85

Cyclic fatty acids; Frying oils; Gas chromatography; High-performance liquid chromatography; Mass spectrometry; Oleic acid; Silver ion chromatography; Sunflower oil **82**, 101

Diacylglycerol; Lipid chain dynamics; Spin label; ESR; Slow motion simulation **82**, 7

Dialkyl polyoxyethylene glycerol ethers; Synthesis; Novel non-ionic surfactants; Aggregation properties **82**, 89

Dielaidoylphosphatidylethanolamine; Lanthanum; Lipid polymorphism; Differential scanning calorimetry; Phosphatidylethanolamine; Hexagonal II **82**, 73

Differential scanning calorimetry; Lanthanum; Lipid polymorphism; Dielaidoylphosphatidylethanolamine; Phosphatidylethanolamine; Hexagonal II **82**, 73

Differential scanning calorimetry; Photothermal phenomena; Photopyroelectric technique; Phase transitions; Fatty acids; Thermal parameters **82**, 15

Dihydroxy fatty acids; Nonenzymic lipid peroxidation; Hydroxy-oxo fatty acids; Hydroperoxy oxo fatty acids; PUFAs **82**, 25

Dimerization constant; Merocyanine 540; Lipid vesicles; Gel state **82**, 111

2,4-Dimethyltetradecanoic acid; *Mycobacterium kansasii*; Glycolipid antigens; Fatty acid **82**, 141

Dioleoylphosphatidylethanolamine; Hydration; FTIR spectroscopy; Lyotropic phase transition; Non-bilayer phases; Dipalmitoylphosphatidylcholine **82**, 191

Dipalmitoylphosphatidylcholine; Dioleoylphosphatidylethanolamine; Hydration; FTIR spectroscopy; Lyotropic phase transition; Non-bilayer phases **82**, 191

Drug carrier; Liposomes; Thermosensitivity; pH Sensitivity **82**, 133

DSC; Lysolecithin; Phosphatidylethanolamine; ^{2}H-NMR; ^{31}P-NMR; Lipid bilayers **82**, 147

Electron microscopy; Macroripples; Phosphatidylcholines; Freeze-fracture **82**, 179

Epicatechin; Epicatechin gallate; Epigallocatechin; Epigallocatechin gallate; Jasmine tea **82**, 163

Epicatechin gallate; Epicatechin; Epigallocatechin; Epigallocatechin gallate; Jasmine tea **82**, 163

Epigallocatechin; Epicatechin; Epicatechin gallate; Epigallocatechin gallate; Jasmine tea **82**, 163

Epigallocatechin gallate; Epicatechin; Epicatechin gallate; Epigallocatechin; Jasmine tea **82**, 163

ESR; Diacylglycerol; Lipid chain dynamics; Spin label; Slow motion simulation **82**, 7

Fatty acid epoxides; Myocardial infarction; Lipid peroxidation; Glyoxal; α-Hydroxyaldehydes; Plasmalogens; Hydroxy fatty acids; Leukotoxins **82**, 39

Fatty acid mixture; Unsaturated fatty acids; Solid-liquid phase diagram; High pressure **82**, 63

Fatty acid; *Mycobacterium kansasii*; 2,4-Dimethyltetradecanoic acid; Glycolipid antigens **82**, 141

Fatty acids; ^{1}H-NMR spectroscopy; Rational functions; Logarithmic functions; Allylic hydroxy groups; Fatty esters **82**, 33

Fatty acids; Photothermal phenomena; Photopyroelectric technique; Differential scanning calorimetry; Phase transitions; Thermal parameters **82**, 15

Fatty alcohols; Inverse micellar cubic phase; Lipid mixtures; X-ray diffraction **82**, 53

Fatty esters; ^{1}H-NMR spectroscopy; Rational functions; Logarithmic functions; Allylic hydroxy groups; Fatty acids **82**, 33

Free aldehydes; Plasmalogens; Bovine brain; Plasmalogen epoxide; α-Hydroxyaldehydes; Aging **82**, 173

Freeze-fracture; Macroripples; Phosphatidylcholines; Electron microscopy **82**, 179

Frying oils; Cyclic fatty acids; Gas chromatography; High-performance liquid chromatography; Mass spectrometry; Oleic acid; Silver ion chromatography; Sunflower oil **82**, 101

FTIR spectroscopy; Dioleoylphosphatidylethanolamine; Hydration; Lyotropic phase transition; Non-bilayer phases; Dipalmitoylphosphatidylcholine **82**, 191

Gas chromatography; Cyclic fatty acids; Frying oils; High-performance liquid chromatography; Mass spectrometry; Oleic acid; Silver ion chromatography; Sunflower oil **82**, 101

Gel state; Merocyanine 540; Dimerization constant; Lipid vesicles **82**, 111

Glycolipid antigens; *Mycobacterium kansasii*; 2,4-Dimethyltetradecanoic acid; Fatty acid **82**, 141

Glyoxal; Myocardial infarction; Lipid peroxidation; α-Hydroxyaldehydes; Plasmalogens; Hydroxy fatty acids; Leukotoxins; Fatty acid epoxides **82**, 39

Hexagonal II; Lanthanum; Lipid polymorphism; Differential scanning calorimetry; Dielaidoylphosphatidylethanolamine; Phosphatidylethanolamine **82**, 73

High-performance liquid chromatography; Cyclic fatty acids; Frying oils; Gas chromatography; Mass spectrometry; Oleic acid; Silver ion chromatography; Sunflower oil **82**, 101

High pressure; Unsaturated fatty acids; Fatty acid mixture; Solid-liquid phase diagram **82**, 63

^{2}H-NMR; Lysolecithin; Phosphatidylethanolamine; ^{31}P-NMR; DSC; Lipid bilayers **82**, 147

^{1}H-NMR spectroscopy; Rational functions; Logarithmic functions; Allylic hydroxy groups; Fatty acids; Fatty esters **82**, 33

Hydration; Dioleoylphosphatidylethanolamine; FTIR spectroscopy; Lyotropic phase transition; Non-bilayer phases; Dipalmitoylphosphatidylcholine **82**, 191

Hydrogen bond; Phospholipids; Polar head group; Acetylation **82**, 1

Hydroperoxy oxo fatty acids; Nonenzymic lipid peroxidation; Dihydroxy fatty acids; Hydroxy-oxo fatty acids; PUFAs **82**, 25

α-Hydroxyaldehydes; Myocardial infarction; Lipid peroxidation; Glyoxal; Plasmalogens; Hydroxy fatty acids; Leukotoxins; Fatty acid epoxides **82**, 39

α-Hydroxyaldehydes; Plasmalogens; Bovine brain; Plasmalogen epoxide; Free aldehydes; Aging **82**, 173

Hydroxy fatty acids; Myocardial infarction; Lipid peroxidation; Glyoxal; α-Hydroxyaldehydes; Plasmalogens; Leukotoxins; Fatty acid epoxides **82**, 39

Hydroxy-oxo fatty acids; Nonenzymic lipid peroxidation; Dihydroxy fatty acids; Hydroperoxy oxo fatty acids; PUFAs **82**, 25

Interdigitation; Bilayer membrane; Phase transition; Pressure; Phospholipids; Vesicles **82**, 125

Inverse micellar cubic phase; Fatty alcohols; Lipid mixtures; X-ray diffraction **82**, 53

Jasmine tea; Epicatechin; Epicatechin gallate; Epigallocatechin; Epigallocatechin gallate **82**, 163

Lanthanum; Lipid polymorphism; Differential scanning calorimetry; Dielaidoylphosphatidylethanolamine; Phosphatidylethanolamine; Hexagonal II **82**, 73

Leukotoxins; Myocardial infarction; Lipid peroxidation; Glyoxal; α-Hydroxyaldehydes; Plasmalogens; Hydroxy fatty acids; Fatty acid epoxides **82**, 39

Lipid bilayers; Lysolecithin; Phosphatidylethanolamine; ^{2}H-NMR; ^{31}P-NMR; DSC **82**, 147

Lipid chain dynamics; Diacylglycerol; Spin label; ESR; Slow motion simulation **82**, 7

Lipid mixtures; Inverse micellar cubic phase; Fatty alcohols; X-ray diffraction **82**, 53

Lipid peroxidation; Myocardial infarction; Glyoxal; α-Hydroxyaldehydes; Plasmalogens; Hydroxy fatty acids; Leukotoxins; Fatty acid epoxides **82**, 39

Lipid polymorphism; Lanthanum; Differential scanning calorimetry; Dielaidoylphosphatidylethanolamine; Phosphatidylethanolamine; Hexagonal II **82**, 73

Lipid vesicles; Merocyanine 540; Dimerization constant; Gel state **82**, 111

Liposomes; Drug carrier; Thermosensitivity; pH Sensitivity **82**, 133

Logarithmic functions; ^{1}H-NMR spectroscopy; Rational functions; Allylic hydroxy groups; Fatty acids; Fatty esters **82**, 33

Lyotropic phase transition; Dioleoylphosphatidylethanolamine; Hydration; FTIR spectroscopy; Non-bilayer phases; Dipalmitoylphosphatidylcholine **82**, 191

Lysolecithin; Phosphatidylethanolamine; ^{2}H-NMR; ^{31}P-NMR; DSC; Lipid bilayers **82**, 147

Macroripples; Phosphatidylcholines; Freeze-fracture; Electron microscopy **82**, 179

Mass spectrometry; Cyclic fatty acids; Frying oils; Gas chromatography; High-performance liquid chromatography; Oleic acid; Silver ion chromatography; Sunflower oil **82**, 101

Merocyanine 540; Dimerization constant; Lipid vesicles; Gel state **82**, 111

Mycobacterium kansasii; 2,4-Dimethyltetradecanoic acid; Glycolipid antigens; Fatty acid **82**, 141

Myocardial infarction; Lipid peroxidation; Glyoxal; α-Hydroxyaldehydes; Plasmalogens; Hydroxy fatty acids; Leukotoxins; Fatty acid epoxides **82**, 39

Non-bilayer phases; Dioleoylphosphatidylethanolamine; Hydration; FTIR spectroscopy; Lyotropic phase transition; Dipalmitoylphosphatidylcholine **82**, 191

Nonenzymic lipid peroxidation; Dihydroxy fatty acids; Hydroxy-oxo fatty acids; Hydroperoxy oxo fatty acids; PUFAs **82**, 25

Nordolichoic acid; Polyprenol **82**, 79

Novel non-ionic surfactants; Synthesis; Dialkyl polyoxyethylene glycerol ethers; Aggregation properties **82**, 89

Oleic acid; Cyclic fatty acids; Frying oils; Gas chromatography; High-performance liquid chromatography; Mass spectrometry; Silver ion chromatography; Sunflower oil **82**, 101

Phase transition; Bilayer membrane; Interdigitation; Pressure; Phospholipids; Vesicles **82**, 125

Phase transitions; Photothermal phenomena; Photopyroelectric technique; Differential scanning calorimetry; Fatty acids; Thermal parameters **82**, 15

Phosphatidylcholines; Macroripples; Freeze-fracture; Electron microscopy **82**, 179

Phosphatidylethanolamine; Lanthanum; Lipid polymorphism; Differential scanning calorimetry; Dielaidoylphosphatidylethanolamine; Hexagonal II **82**, 73

Phosphatidylethanolamine; Lysolecithin; ^{2}H-NMR; ^{31}P-NMR; DSC; Lipid bilayers **82**, 147

Phospholipids; Bilayer membrane; Interdigitation; Phase transition; Pressure; Vesicles **82**, 125

Phospholipids; Polar head group; Hydrogen bond; Acetylation **82**, 1

Photopyroelectric technique; Photothermal phenomena; Differential scanning calorimetry; Phase transitions; Fatty acids; Thermal parameters **82**, 15

Photothermal phenomena; Photopyroelectric technique; Differential scanning calorimetry; Phase transitions; Fatty acids; Thermal parameters **82**, 15

pH Sensitivity; Liposomes; Drug carrier; Thermosensitivity **82**, 133

Plasmalogen epoxide; Plasmalogens; Bovine brain; Free aldehydes; α-Hydroxyaldehydes; Aging **82**, 173

Plasmalogens; Bovine brain; Plasmalogen epoxide; Free aldehydes; α-Hydroxyaldehydes; Aging **82**, 173

Plasmalogens; Myocardial infarction; Lipid peroxidation; Glyoxal; α-Hydroxyaldehydes; Hydroxy fatty acids; Leukotoxins; Fatty acid epoxides **82**, 39

^{31}P-NMR; Lysolecithin; Phosphatidylethanolamine; ^{2}H-NMR; DSC; Lipid bilayers **82**, 147

Polar head group; Phospholipids; Hydrogen bond; Acetylation **82**, 1

Polyprenol; Nordolichoic acid **82**, 79

Pressure; Bilayer membrane; Interdigitation; Phase transition; Phospholipids; Vesicles **82**, 125

PUFAs; Nonenzymic lipid peroxidation; Dihydroxy fatty acids; Hydroxy-oxo fatty acids; Hydroperoxy oxo fatty acids **82**, 25

Rational functions; ^{1}H-NMR spectroscopy; Logarithmic functions; Allylic hydroxy groups; Fatty acids; Fatty esters **82**, 33

Silver ion chromatography; Cyclic fatty acids; Frying oils; Gas chromatography; High-performance liquid chromatography; Mass spectrometry; Oleic acid; Sunflower oil **82**, 101

Slow motion simulation; Diacylglycerol; Lipid chain dynamics; Spin label; ESR **82**, 7

Solid-liquid phase diagram; Unsaturated fatty acids; Fatty acid mixture; High pressure **82**, 63

Spin label; Diacylglycerol; Lipid chain dynamics; ESR; Slow motion simulation **82**, 7

Sunflower oil; Cyclic fatty acids; Frying oils; Gas chromatography; High-performance liquid chromatography; Mass spectrometry; Oleic acid; Silver ion chromatography **82**, 101

Synthesis; Ceramide phosphate; Thiophosphate **82**, 85

Synthesis; Novel non-ionic surfactants; Dialkyl polyoxyethylene glycerol ethers; Aggregation properties **82**, 89

Thermal parameters; Photothermal phenomena; Photopyroelectric technique; Differential scanning calorimetry; Phase transitions; Fatty acids **82**, 15

Thermosensitivity; Liposomes; Drug carrier; pH Sensitivity **82**, 133

Thiophosphate; Ceramide phosphate; Synthesis **82**, 85

Unsaturated fatty acids; Fatty acid mixture; Solid-liquid phase diagram; High pressure **82**, 63

Vesicles; Bilayer membrane; Interdigitation; Phase transition; Pressure; Phospholipids **82**, 125

X-ray diffraction; Inverse micellar cubic phase; Fatty alcohols; Lipid mixtures **82**, 53
